EXAMINER'S AMENDMENT

1. This communication is responsive to Amendment dated 3/15/2006.

Claims 7-10 are newly added. Accordingly, claims 1-10 are pending for the examination.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Since the title of the invention is not descriptive, a new title is required that is clearly indicative of the invention to which the claims are directed.

The title has been changed to: "Display device and diode array panel therefor, wherein the diode array panel comprising the first diode having a resistance different from the second diode."

Allowable Subject Matter

Claims 1-10 are allowed.

Reasons for Allowance

Claims 1-10 are allowed since there is no prior art of record that teaches or suggests a liquid crystal display device and diode array panel therefor comprising a relationship of various elements as claimed with the specific allowable subject matter cited in the following claim:

Claims 1 and 4:

Art Unit: 2871

- a pair of first and second signal lines transmitting select pulses having opposite polarity
- a third signal line transmitting data voltages
- a first field generating electrode formed between the first signal line and the second signal line
- a first diode connected between the first signal lines and the first field generating electrode
- a second diode connected between the second signal lines and the first field generating electrode and having a resistance different from the first diode

Claims 7, 2, 3 and 9 are allowed since they depend on the allowed claim 1.

Claims 8, 5, 6 and 10 are allowed since they depend on the allowed claim 4.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ishimoto (US 6,593,991) discloses a liquid crystal display device comprising a pair of first and second signal lines transmitting select pulses having opposite polarity; a first field generating electrode formed between the first signal line and the second signal line; a first diode connected between the first signal lines and the first field generating electrode; a second diode connected between the second signal

lines and the first field generating electrode. However, Ishimoto does not disclose the first electrode having a resistance different from the second electrode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
